

Model Idea

1. Student Side (WhatsApp Bot)

- Daily check-ins + casual friendly chat (AI-driven).
- Background me risk-prediction model chalega.
- Agar **risk detect hota hai** ya student khud "help" bole, to escalation trigger hoga.

2. Escalation → Mentor Dashboard

- Mentor ke dashboard pe student ka case summary jayega (anonymized).
- Mentor decide karega ki wo counseling session kare.

3. One-Time Token System (Safe Chat Bridge)

- System ek **unique session token** generate karega.
- Is token se student aur mentor ek **temporary chat room** (tumhare software me) join karenge.
- Ye session **time-bound** hoga (say 30 mins).
- Session khatam hote hi token expire ho jayega.

4. Future Sessions

- Agar student ko phir baat karni hai, to ek **new token** generate hoga.
- Matlab koi permanent exposure nahi, har baar **controlled, safe session** hoga.

Model Advantages:

- **Privacy & Safety:** Student aur mentor dono safe feel karenge (identity hidden unless required).
- **Control:** Tumhari system ke paas pura control hoga → kab aur kaise chat open hogi.

- **Trust Building:** Students pe burden nahi hoga “app install” karne ka, sirf WhatsApp ka use.
- **Scalability:** Same flow easily 1000+ students ke liye chal sakta hai.
- **Hackathon Friendly:** Token system ekdum fresh aur innovative lagega judges ke liye.
